COUNTRIES USING HYDROXYCHLOROQUINE HAVE A LOWER MORTALITY RATE

RED TABLE (RARE HCQ USE): 423 DEATHS PER MILLION. 226,409 DEATHS OUT OF JUST OVER 600 MILLION IN POPULATION.

ORANGE TABLE (MIX HCQ USE): 140 DEATHS PER MILLION. 301,900 DEATHS OUT OF ALMOST 2.5 BILLION IN POPULATION.

GREEN TABLE (PRIME HCQ USE): 88 DEATHS PER MILLION. 118,647 DEATHS OUT OF JUST OVER 2.7 BILLION IN POPULATION.

The numbers clearly show that those countries using HCQ as their major source of prevention have a substantially lower death rate. A survival rate of 99.996%. A mortality rate of .004%, 4 Thousandth of 1% chance of dying from COVID-19.

TFI Post | June 1, 2020

- May 22, after Trump's admission of HCQ, The Lancet, a UK based premier scientific journal, published a study which argued that giving HCQ for treatment to patients increases death risks.
- Death rate in India lowest in the world
- "HCQ has beneficial effects in infection risk reduction" – Dr. Samiran Panda, Dir. ICMR Nat'l Aids Res. Inst.
- India – 26 per mil deaths. Western world – 423 per mil deaths.
- Research from China which was conducted in the very early days of Covid-19 spread, showed that HCQ brought down the mortality rate among patients. The study was conducted at Tongji Hospital in Wuhan, the initial epicenter of the pandemic, between February 1 and April 8 on 568 Covid -19 patients and was funded by China's Ministry of Science and Technology, Nature Science Foundation and Ma Yun Foundation. As per the study, the mortality rate among the group given HCQ was 18.8 percent compared to 43.5 percent among those who were not given the drug.
